Reviews

Absolutely among the finest pdf I have got possibly read. I am quite late in start reading this one, but better then never. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Prof. Lois Cormier II)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 Excerpt: .remains invariant, then p-p =?i2p-p; whence it is obvious that pp = 0. In general: The inner product of any singular vector by itself is zero, and this suffices to characterize a singular vector. Hence rr reduces to r-r = 2xy p-q. Before proceeding further with the definition of the inner product, we may observe that the signs of x and y are determined by that one of the four angles (made by the fixed lines) in which r lies. According, then, as x and y have the same sign or different signs, the vector r belongs to one or the other of the classes (7) or (8), and the product r-r will have one sign or the other. These considerations suffice to show that if r and r are two vectors, and if r-r and r -r have the same sign, the vectors are of the same class, but if r-r and r -r are of opposite sign, r and r are of different classes. We have here a marked departure from Euclidean geometry, in which the inner product of a real vector by itself is always positive. We are now in a position to complete the definition of the inner product by stating that the product is a scalar, and that the product of a vector by itself is equal to the square of the interval of the vector, taken positively if the vector is of class (7), negatively if of class (5). This...
