Essential Mathematics and Statistics for Forensic Science

By Craig Adam

John Wiley and Sons Ltd. Paperback. Book Condition: new. BRAND NEW, Essential Mathematics and Statistics for Forensic Science, Craig Adam, This text is an accessible, student-friendly introduction to thewide range of mathematical and statistical tools needed by theforensic scientist in the analysis, interpretation and presentationof experimental measurements. From a basis of high school mathematics, the book developsessential quantitative analysis techniques within the context of abroad range of forensic applications. This clearly structured textfocuses on developing core mathematical skills together with anunderstanding of the calculations associated with the analysis ofexperimental work, including an emphasis on the use of graphs andthe evaluation of uncertainties. Through a broad study ofprobability and statistics, the reader is led ultimately to the useof Bayesian approaches to the evaluation of evidence within thecourt. In every section, forensic applications such as ballisticstrajectories, post-mortem cooling, aspects of forensicpharmacokinetics, the matching of glass evidence, the formation ofbloodstains and the interpretation of DNA profiles are discussedand examples of calculations are worked through. In every chapterthere are numerous self-assessment problems to aid studentlearning. Its broad scope and forensically focused coverage make this bookan essential text for students embarking on any degree course inforensic science or forensic analysis, as well as an invaluablereference...

Reviews

This is the finest publication we have read through right up until now. Better then never, though i am quite late in start reading this one. Its been written in an remarkably easy way in fact it is only after i finished reading through this book by which basically altered me, affect the way i think.
